How can policy be good for business?

- Levels the playing field
- Expands markets for safer products.
- Creates a more predictable regulatory system.
- Reduces costs and risks, especially product liability, associated with managing toxic chemicals in products across supply chains.
- Enhances productivity from improved employee health and lowers expenses .

How can policy be good for business?

- Increases trust among consumers, employees, communities, and investors, leading to a more positive business environment.
- Improves transparency and communication throughout the supply chain, leading to increased confidence for downstream users and reduced risks from supply chain interruptions.
- Creates a more competitive, innovative, and economically sustainable chemical industry in the U.S.
